

Power BI Usage Analytics System Architecture Diagram

[Get Started →](#)

Discover a new way to **monitor your Power BI Online services**. Seamlessly connect, schedule, and run usage scripts to generate daily refreshed reports, providing you with **greater visibility into Power BI online usage**.

Security

Azure Active Directory handles Identity and Access Management for all Azure Services

Azure Key Vault manages secrets (e.g. on-prem and in-cloud SQL credentials)

Data is encrypted in transit and at rest by default in Data Factory, and Azure SQL

Monitoring/Alerting

Azure Monitor watches for failed Data Factory pipeline runs

Azure Monitor alerts trigger emails to your operations Team
